Subject: Oil spill in Newark Bay
There was an oil spill of unknown quantity into Newark Bay on Friday. The spill occurred on the southern end of the bay, on the far side of Shooter's Island at May Ship Repair.

We do not know now if this will impact sampling Wednesday and Thursday. There are booms out to attempt to prevent the spill from reaching bird sanctuary at Shooter's Island.

OSI will find out if there are Coast Guard navigation restrictions in that end of the bay.

We are due to sample Newark Bay South on Wednesday and Kill van Kull Thursday. We do not believe it will impact navigating to or sampling at Newark Bay Northeast on Wednesday.
